Sign local contracts that
deliver weekly

Participate in community
projects

08. Engage

09. Grow

Grow local economy
through relationship and
trust.

See God's glory and justice
established in the economy

10. Prosper

HOW IT WORKS:

- You must be a minimum of 18 years old.
- All members must provide personal identification to existing sellers to prevent fake accounts.
- If you're selling your time, you can't charge less than R200/ hour.
- System payouts in other currencies aren't allowed as they'd deplete community credit. However, you can offer virtual cash to other members in exchange for available currencies, discounts, or products.
- It's not possible to create debt with Merged Cash. However, you can form agreements where one party owes payment and the other provides a product or service.
- While you can hold onto your purchases, Merged Cash isn't for saving. Its purpose is to circulate, not to be accumulated. If you don't spend at least R500 in virtual cash each week, up to R250 of your virtual cash will automatically be transferred to a community project. Remember to please use it to save more of other currencies.
- Community projects are crucial for system deflation, improving offer quality, and tackling problems that might otherwise go unaddressed. Additionally, members have the opportunity to participate in these projects to earn back credit at the minimum rate.
- To safeguard privacy and prevent fake transactions, an open ledger is maintained and signed by a server on a data island. This allows every member to download and verify all transactions.
- The measure of value for this exchange medium is derived from the trust and activity of its existing members within their specific town or geographic community. The surrounding national currency serves solely as a reference for its value, not as the actual determinant. This design ensures its value is both comprehensible and independent.

FAQ:

What's the point of MergedCash and why should I participate in it?

- Merged Cash is like having an ATM in your pocket. Only this ATM does what money can't do. It never sells out the members of your community.

If I can use cryptocurrency, why use MergedCash?

- Crypto enables crime and monopolization. MergedCash serves the public, connects people, and prevents crime.

Is it legal to create money out of nothing?

- It's illegal to fake money and anything else for that matter. It's never illegal to create a gift voucher and limit it to a geographic area. It's also proven to increase the purchasing power of the national economy.

What about tax?

- We aren't responsible for tax evasion. All business transactions, whether monetary or material, remain subject to tax. However, it's never been possible to tax small transactions between friends.

How can MergedCash be inflation-proof?

- England enjoyed 100 years of 0% inflation in the 1700s due to public regulation of gold and paper money. MergedCash adopts a similar principle, with members regulating its supply via an overflow valve into community projects. This system understands that lacking products is worse than lacking currency. MergedCash therefore also promotes new market offerings and secures independent growth.
